The Anatomy of the Rural Culvert

Your culvert is your friend.

Who should I call
when I have an issue
with my culvert?

FAQ's

How to Maintain a Pre-existing Culvert:

- You are responsible for culvert maintenance. Culvert maintenance involves keeping both the inlet and outlet of the pipe free of debris to that it works properly, including removing snow and ice during the winter months whenever possible.
- Ensure your culvert is constructed of a recognized product. (For example we wouldn't accept a culvert that is manufactured out of wood).

“Am I responsible for clearing the snow off of my access in winter?”

Yes. An individual who has an access point on a BC highway is responsible for all maintenance including clearing snow from highway plowing operations at the access entrance.

All clear? We hope so. Culverts are an important way to keep water and debris moving smoothly off of BC roads.
